## **COMMENCEMENT OF A DETAILED AND AGGRESSIVE DRILLING PROGRAM AT THE MAJOR NEW MINERAL DISCOVERY “WHITEWASH SOUTH”**

---

### **Highlights**

- **A DRILL RIG CAPABLE OF DIAMOND DRILLING HAS POSITIONED THE FIRST PRE-COLLAR AT WHITEWASH SOUTH AND HAS COMMENCED DRILLING THIS MORNING.**
- **AS WELL A REVERSE CIRCULATION DRILL RIG IS EXPECTED ON-SITE LATER THIS WEEK.**
- **SURFACE MAPPING SHOWS BRECCIA OUTCROPPING SEVERAL HUNDRED METRES SOUTH OF WHITEWASH SOUTH AND COVERING AN AREA IN EXCESS OF 400M IN LENGTH AND 300M IN WIDTH.**

The Directors of Aussie Q Resources Limited (ASX:AQR) are pleased to announce that the diamond drill rig has arrived at the exciting new Whitewash South Project area and has begun drilling this morning. Recently AQR has made ASX announcements regarding assays from previous drilling at Whitewash South (within the 100% AQR owned Whitewash South prospect EPM14628) and these results have shown that the area hosts a strongly mineralised porphyry related polymict breccia indicating the potential for an exceptionally large mineralised system containing good grades of molybdenum, copper and tungsten.

This latest drilling program is intended to better delineate the very unusual mineralisation encountered in drill holes 90, 91, 94D, 95D and 96D drilled at Whitewash South. Whitewash South appears to be the areole around a possible large complex mineralised polymetallic breccia pipe.

The reasoning behind the assumption that “this is an exceptionally large system” is that the breccia and gas phase matrix do not outcrop at any of the previously drilled collars, the breccia has now been discovered outcropping to the south. Of equal importance was the discovery of shatter cones in the same area. The centre of this breccia outcrop is located 400m to the south-west of the above drilling and has been mapped over a region 400m long by 300m wide.

This round of drilling will assess the overall size of the Whitewash South mineralisation, the company will initially drill 5,000m a combination of diamond core and reverse circulation (RC). Most holes will consist of an RC collar with a diamond core tail. It is anticipated that this drilling program will be extended by the Company depending on the results.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'John Goody', with a small flourish at the end.

John Goody  
Executive Director

*The information in this report that relates to exploration results and mineral resources is based on information compiled by John Leslie Goody, Executive Director of Exploration, Aussie Q Resources Limited and supervised by Dr. Richard Haren who is a Member of The Australasian Institute of Mining and Metallurgy and who has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity undertaken to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr. Richard Haren is a self employed consultant who consults to AQR and has consented to the inclusion in this report of the matters based on this information in the form and context which it appears.*
